1. Overview

1.1 Introduction

OpenVox Simbank is an equipment that can achieve the centralized management and flexible adjustment of a large quantity of sim cards. It is equipped with 64, 128 and 320 card slots, which can match up with our wireless gateways perfectly. After having registered on the Simbank, the wireless gateways are capable to connect with sim cards remotely via TCP/IP without inserting sim cards in the gateways' slots. It features simple operation too. The machine can adapt perfectly to 2G/3G/4G frequency band. Besides, it is compatible with 2G, 3G and 4G sim cards, supporting dynamic allocation and hot plug of sim cards.

1.1.1 Specifications

Table 1-1-1 Simbank Specifications

SIMBANK			
Product Name	simbank-64	simbank-128	Simbank-320
Interface			
SIM Card Slots	64	128	320
Lan	1		
USB	1		
Physical Information			
Weight	2004g	2260g	7000g
Dimension(W/D/H)	262*248*55mm		440*355*62mm
Power Consumption	13W	16W	25W
Power Supply	12V DC/1.5A		100-240V AC
SIM card Voltage	1.8V/3V		
Operation Temperature Range	0°C ~ 40°C		
Operation Humidity Range	10% ~ 90% non-condensing		

Storage Temperature Range

-20°C ~ 70°C

1.1.2 LED Display Instructions

Table 1-1-2 LED Display Instructions

State	Description
Green	sim card has not been assigned
Red	sim card is not available
Green and Flash	sim card has been assigned
Red and Flash	sim card is out of call time
Blind	No card inserted or fail to report information

1.1.3 Front Panel Indicators

The PWR indicator will be light after power-on. The RUN indicator flashes after the system starts up normally. When the network is disconnected, it stops flashing. After pressing and holding the RST button for more than 5 seconds, the device will be restored to the factory settings and the indicator flashes faster.

1.1.4 Key Feature

SIM

- Compatible with 2G/3G/4G SIM cards
- Provides up to 320 SIM Slots
- Dynamic Allocation of SIM Cards
- Hot Swap of SIM Cards with No Service Interruption
- Support call restriction of SIM Cards individually
- Support SIM Card Switchover by Max Call Time
- Support SIM Card Switchover by Max Call Count
- Support SIM Card Switchover by Work Time

- Lock SIM card by Call Time
- Lock SIM card by Call Count
- Lock SIM card by Call Receive Count
- Support SIM card Group
- Support one-to-one allocation of gateways and card group
- Support inquiry mobile bill/number via SMS
- Modify the mobile phone number corresponding to the SIM card
- Support SIM card information batch export

Network Feature

- Network Method: Static IP
- Ping & tracerouteIPv4, UDP/TCP, ARP, NTP, DNS, HTTP/ HTTPS, SSH
- OPlink, NAT traverse
- Network Toolkit

Management & Maintenance

- Support cluster expansion
- Friendly GUI and easy configuration
- Support NTP time synchronization & Client time synchronization
- Firmware Update by HTTP
- Multiple Detailed LOG Output
- Support Chinese/English interface

1.2 Compatible Terminals

- SWG Series Wireless Gateway

Notice: Simbank don't support sim card with pin.

1.3 Build Running Environment

The network environment of simbank is built as shown in the figure. The network connection with the gateway should be guaranteed when in use. The minimum uplink and downlink bandwidth is required to be above 4 Mbps, and the delay of connecting with gateway is not more than 400ms. Otherwise, the sim card cannot be sure work normally. During the call, the voice data does not transmitted via simbank.

Notice: You'd better insert the sim card into simbank before use it. For fear that insert sim card after power-on leads to loosen card slots and the simbank could not read sim card data correctly.

Figure 1-3-1 Network Configuration

1.4 Access Device

- **Step 1**

Use a network cable to connect the device to the LAN or directly to the computer.

- **Step 2**

The default IP address of device is 172.16.100.1. Modify the IP address of the local computer

to ensure that the computer and the device are in the same network segment.

- **Step 3**

Input the IP address of device (172.16.100.1) in the browser's address bar and open the login page.

- **Step 4**

Enter the username and password to log in to the device. The default username and password are both admin.

1.5 Quick Start

1.5.1 Simbank Settings

- **Step 1**

Click “**NETWORK**” to enter the network settings page, select “Static” for **Type**, fill in the **Address**, **Netmask**, **Default Gateway** and **DNS Server**, save changes and apply.

Figure 1-5-1 Network Configuration

LAN IPv4	
Interface:	eth0
Type:	Static ▾
MAC:	A0:98:05:0E:61:41

IPv4 Settings	
Address:	<input type="text" value="172.16.6.141"/>
Netmask:	<input type="text" value="255.255.0.0"/>
Default Gateway:	<input type="text" value="172.16.0.1"/>

DNS Servers	
DNS Server 1:	<input type="text" value="172.16.0.1"/>
DNS Server 2:	<input type="text" value="172.168.1.2"/>
DNS Server 3:	<input type="text" value="172.168.1.3"/>
DNS Server 4:	<input type="text" value="172.168.1.4"/>

- **Step 2**

Navigate to **SYSTEM** -> **General**, the **Serial Number** in **Simbank Options** is serial number of this device, copy it, set **Net Mode** to Local and save.

Figure 1-5-2 Simbank Option

Simbank Options	
Serial Number:	<input type="text" value="TACQ2YKE"/>
Net Mode	Local ▾

- **Step 3**

Select **REGISTER** -> **Simbank**, click "Add New Simbank Info". Turn on the **Enable** switch (Be on by default). As shown in the figure, the Serial Number is filled with the simbank serial number copied in step 2.

Figure 1-5-3 Add New Simbank Info

Enable:	<input checked="" type="checkbox"/> ON
Serial Number:	<input type="text" value="TACQ2YKB"/>
Alias name:	<input type="text" value="Local"/>
Description:	<input type="text" value="Default setting"/>

- **Step 4**

Select **REGISTER -> Gateway**, click "Add New Gateway Info", and register as shown.

Note: The serial number of wireless gateway needs to be obtained on the gateway. The serial number of each device is unique. If the **Enable** switch is off (it turns on by default when registered), neither simbank nor gateway can be registered. It is recommended to fill in the number of gateway channels in the **Gateway Line Number**. If the **Gateway Line Number** exceeds the number of channels, sim cards will be allocated according to the actual number of channels.

Figure 1-5-4 Create Gateway Info

Create gateway Info

Enable:	<input checked="" type="checkbox"/> ON
Serial Number:	<input type="text" value="TACQUYKW"/>
Alias name:	<input type="text" value="SWG2032"/>
Gateway Line Number:	<input type="text" value="32"/>
Sim Group:	<input checked="" type="checkbox"/> ALL_SIM
Description:	<input type="text" value="Test"/>

The sim group must be checked when registering the gateway. The default sim group "ALL_SIM" containing all sim card members in simbank.

- **Step 5**

After completing all the above step, enter the **REGISTER -> Gateway / Simbank** page, you can see the gateway information and simbank information you just added, the gateway / simbank's state will become online after successful registration.

1.5.2 Wireless Gateway Settings

Access to the Wireless Gateway and set parameters in **Module -> Simbank** page. As shown in the figure, the Simemusvr switch is **on**, the serial number is automatically generated for registration of the gateway. Select **Normal** network mode, and click “Save” to save settings.

Figure 1-5-5 Simbank Options

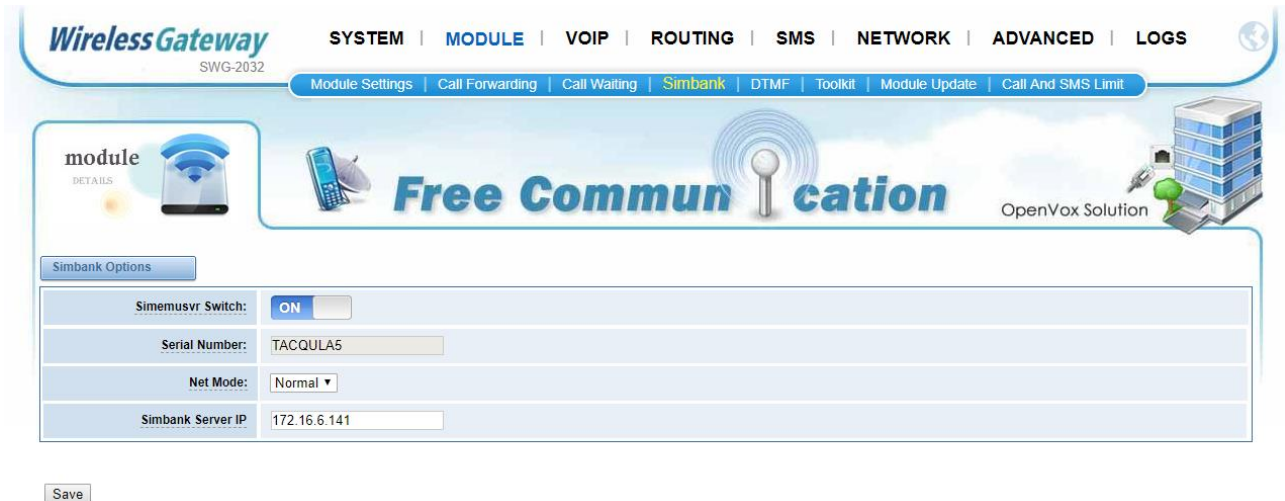

Figure 1-5-1 Simbank Options Description

Options	Description
Simemusvr Switch	When the switch is on, the local sim card will be not available
Serial Number	The serial number generated for registration, unique
Net Mode	Normal for local connection, OPlink for external network

Follow the above guide, you will register the gateway and simbank successfully, simbank will assign sim card for this wireless gateway remotely.

2 Function Settings

2.1 SYSTEM

2.1.1 Sim Status

The status of each sim card is displayed in the **Sim Status** page. The color and description of the corresponding indicator for each status are listed in the following table. When the mouse is hovering over the specific sim indicator, the location of this sim card and the remaining call time are displayed.

Table 2-1-1 Page Indicator Instruction

Color	Status	Description
Grey	Empty	No card or card is not available
Yellow	Ready	The sim card is ready to be assigned to the gateway
Orange	Sleep	In sleep, it takes a while to use
Blue	Registering	Already assigned, in registering
Green	Assigned	Already assigned and registered successfully
Red	Talking	The SIM card is on a call
Orange(with notch)	Locked	The set call time has run out and cannot be assigned

2.1.4.2 Simbank Options

The simbank serial number is the serial number generated automatically by the device, which is required when registering. Simbank supports cluster expansion. When the **Net Mode** is **Local**, simbank is registered to local device. Otherwise, it is registered to the remote end and user should fills in the SimProxy Server IP.

Figure 2-1-5 Simbank Options

[Save](#)

The **Policy Name** is required and unique. The **Alloc Condition** options includes Ascending, Descending, Random, Min Call Time, and so on. The SIM card is assigned according to the selected priority order.

The **Switch Condition** is the toggle of the card switch strategy function. Once it opened, the card switch strategy parameter needs to be set. After meeting the card switch condition, the sim card will sleep for a period of time, and cannot be allocated for use during this time. There are three types of card switch strategies currently: call time, call count and work time.

When the **Switchover by Max Call Time Once** is opened, set the call duration. The allocated sim card will be switched when runs out of the time.

When the **Switchover by Max Call Count Once** is opened, set the call count. The allocated sim card will be switched when reaches the count.

When the **Switchover by Work Time Once** is opened, set the work time. The allocated sim card will be switched when reaches the time.

Sleep time of switch cards is the card sleep time after switched. The above three card switch strategies can be opened at the same time, and Simbank will switch the card according to the strategy that is first satisfied in actual use.

The **Call Limit** is the toggle of lock card function. Once it opened, the Call limit parameter needs to be set. After meeting the call limit condition, the sim card will be locked until next use period.

During this time, the sim card cannot be allocated and used. **Call Limit** can be based on the call time, the call count, the call receive count, and so on.

The **Sim Card Refresh Mode** is the information processing method when the sim card reports information to the server.

Table 2-3-1 Policy Description

Option	Description
Policy Name	Unique
Alloc Condition	Priority order of assigning sim cards
Switich Condition	When the state of SIM card reaches one of the following conditions, simbank will automatically put the SIM card to sleep, and select another ready SIM card assigning to the gateway.
Switchover by Max Call Time Once	When the total call time (outgoing and answered) of the SIM card reaches the set limit, the card will be switched.
Switchover by Max Call Count	When the total call count (outgoing and answered) of the SIM

Once	card reaches the set limit, the card will be switched.
Switchover by Work Time Once	Start timing from the SIM card is assigned to the gateway. When the total work time reaches the set limit, the card will be switched.
Sleep time of switch cards	Sleep time of the switched card
Call Limit	When the state of SIM card reaches one of the following conditions, simbank will automatically lock the SIM card, and select another ready SIM card assigning to the gateway. They can only be assigned again after unlocked.
Limit by Max Call count hour	When the call count (outgoing and answered) per hour reaches the set value, the card will be locked until to the next whole point.
Limit by Max Call Count day	When the call count (whether or not answered) per day reaches the set value, the card will be locked until to the next day.
Limit by Max Call Receive day	When the call count (outgoing and answered) per day reaches the set value, the card will be locked until to the next day.
Limit by Max Call time day	When the total call time (outgoing and answered) per day reaches the set value, the card will be locked until to the next day.
Limit by Max Call time month	When the total call time (outgoing and answered) per month reaches the set value, the card will be locked until to the next month's reset day.
Reset Day	Reset date of monthly call timing
Sim Card Refresh Mode	the refresh mode of SIM card status data

2.3.2 Sim Group

Simbank supports Sim group, which can set the specified sim card group for each gateway. The relationship between the gateway and the card group is one-to-one, and one card group can only be used by one gateway device.

Figure 2-3-3 SIM Group

Group Name	Alias name	Gateway Serial Number	Members	Policy	Sim Number	Actions
ALL_SIM	default	TACQUYKW	TACQ2YKB- 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22,23,24,25,26,27,28,29,30,31,32,33,34,35,36,37,38,39,40,41,42,43,44,45,46,47,48,49,50,51,52,53,54,55,56,57,58,59,60,61,62,63,64,65,66,67,68,69,70,71,72,73,74,75,76,77,78,79,80,81,82,83,84,85,86,87,88,89,90,91,92,93,94,95,96,97,98,99,100,101,102,103,104,105,106,107,108,109,110,111,112,113,114,115,116,117,118,119,120,121,122,123,124,125,126,127,128	openvox	128	 

New Sim Group

Go to **SIM POLICY -> Sim Group**. Create a new SIM card group and name it. In the "**Simbank Serial Number**", select the Simbank where the SIM card to be used is located and check off the **Simbank Members**, select the created **Policy** and click Save. Once set, the gateway will only assign the SIM card in the "ALL_SIM" group to the corresponding gateway, and the SIM card in the "ALL_SIM" group will not be assigned to other gateways.

One SIM card can only belong to one SIM card group. If you want to modify the SIM card group to which the specified SIM card belongs, you must first delete (uncheck) the SIM card from the original SIM group and then add it to another SIM group.

2.4 SMS

Simbank can specify the SIM card to send SMS messages. This function can also be used to query the number and phone bill, which makes the management of the SIM card more convenient.

2.4.1 SMS Sender

Enter **SMS**—>**SMS Sender** page, select simbank and corresponding sim card, fill in **Destination Number** and **message** then click **send**.

2.4.2 SMS Inbox

The **SMS Inbox** page displays the SMS reply to the query messages sent from toolkit (simbank will

not obtain SMS messages from the gateway), and these text messages will be clean up after shutdown. Users can view and filter them.

Figure 2-4-2 SMS Inbox

	SMS Type:	SIM Balance ▾
	Destination Number:	SIM Balance phone number <input type="text"/>
	Message:	<input type="text"/>
	Match Number:	<input type="text"/>
	The Matching Characters:	<input type="text"/>
	<input type="button" value="Send"/>	

Fill in **The Matching Characters** according to the received SMS. For example, user want to inquiry the phone number, and the received message is “Your phone number is xxxxxxxxxxxx...”, then fill in the content “number” in **The Matching Characters**. Generally speaking, the more you fill in, the more accurate the query results is, but on the other hand, in order to avoid the matching characters too long and consume too much time in matching, it is limited that **The Matching**

Characters filled in here **does not exceed 30 characters**.

Before using the Simbank toolkit for inquiry, it is best to use the gateway to send and receive text messages to determine the format of the received message and the matching content.

2.5 NETWORK

2.5.1 Ethernet Settings

Click **NETWORK** to enter the **Ethernet Settings** page. There are two optional types to set the LAN port IP: **Factory** and **Static**. Factory is the default type, and the IP is 172.16.100.1. This page is not editable when type is "**Factory**". Select the type as "**Static**", set the IP address, netmask, default gateway, DNS Servers and save it.

Figure 2-5-1 Network Settings

LAN IPv4	
Interface:	eth0
Type:	Static ▾
MAC:	A0:98:05:0E:61:41

IPv4 Settings	
Address:	<input type="text" value="172.16.6.141"/>
Netmask:	<input type="text" value="255.255.0.0"/>
Default Gateway:	<input type="text" value="172.16.0.1"/>

DNS Servers	
DNS Server 1:	<input type="text" value="172.16.0.1"/>
DNS Server 2:	<input type="text" value="172.168.1.2"/>
DNS Server 3:	<input type="text" value="172.168.1.3"/>
DNS Server 4:	<input type="text" value="172.168.1.4"/>

Table 2-5-1 Network Settings Description

Option	Description
Interface	The name of network interface.
Type	The method to get IP. Factory: Getting IP address by Slot Number (System information to check slot number). Static: manually set up your Simbank IP.
MAC	Physical address of your network interface.
Address	The IP address of your Simbank.
Netmask	The subnet mask of your Simbank.

Default Gateway	Default Simbank IP address.
DNS Server	A list of DNS IP address. Basically this info is from your local network service provider.

2.5.2 Oplink

When the gateway and simbank do not belong to the same LAN, they cannot be directly accessed. In this case, we provide the Oplink function to connect the two ends. For Simbank, enter the **NETWORK -> Oplink** page shown in Figure 2-5-2 to configure, click Save after the configuration is complete, if the connection is successful, you can see the **connection status** below shows a green “**connected**” prompt.

Figure 2-5-2 Oplink

Oplink Settings

Switch:	ON
Node ID:	1
Simbank Serial Number:	TACQ2YKB
Oplink Server Node:	China

Connection Status

Connection Status:	Connected
--------------------	-----------

Save

Correspondingly change the register settings on the wireless gateway. Set the network mode to Oplink in the **MODULE——>Simbank** page. In this connection mode, note that **the Node ID cannot be duplicated with other gateways registered in the same simbank.**

Figure 2-5-3 Oplink Settings
